EDUCATION

Georgia Institute of Technology December 2027

B.S. Computer Science | Concentration: Artificial Intelligence & Embedded Devices

• **Relevant Coursework**: Design & Analysis of Algorithms, Computer Systems & Networks, Machine Learning, Computer Organization, Advanced Data Structures

EXPERIENCE

Co-Founder & Software Engineer, Rolo Jan 2026 – Present

• Launched an AI personal CRM used by **~50 users**, with **~25% active weekly**, to capture interactions and organize people, meetings, and notes.

• Led product/design, managed three engineers, and conducted **~30 customer interviews** that drove the mobile pivot and voice, LinkedIn, and Gmail integrations.

• Built ingestion and entity-resolution pipelines across **~10,000 contacts**, reconciling LinkedIn, email, name, and phone signals with manual conflict resolution for ambiguous matches.

• Built a two-stage search pipeline using Qdrant vector retrieval, Reciprocal Rank Fusion, and LLM reranking over PostgreSQL-backed contact and interaction data.

Co-Founder, Efficore Aug 2024 – Jun 2025

• Conducted customer discovery for residential energy management, translating operator and resident pain points into product and technical requirements.

• Set up CT-clamp telemetry and analyzed a legacy embedded stack to map inverter, solar, and battery integration constraints.

PROJECTS

MAGK Excel (AI Financial Workflow Automation) TypeScript, Electron, AWS, Bedrock, MCP

• Piloted an AI workflow platform with 10–20 users at an investment organization with **70+ analysts**, automating spreadsheet workflows from PDF and web data.

• Built a typed workflow engine for reconciliation and corporate actions, chaining data extraction, calculations, and Excel updates.

• Built an Electron MCP runtime that discovers stdio/HTTP tools at runtime and lets workflows invoke them without hard-coded integrations.

Weave React Native, TypeScript, FastAPI, PostgreSQL

• Built a full-stack mobile app that turns goals into daily actions and captures voice, photos, and journal reflections to track progress and generate personalized planning.

• Stored completions, photos, and journals as immutable records and precomputed daily aggregates for fast streak and progress dashboards.

LEADERSHIP

Founder & Operator, Hacker House Network 2023 – Present

• Operated seasonal hacker houses for 14 builders across San Francisco and New York, coordinating ~$15K in housing/operations

• Organized coworking, weekly demo nights, and founder sessions; alumni later joined Y Combinator, Residency, and Fermilab.

President, Singapore Society 2026 – Present

• Grew membership by ~20, organized weekly dinners and hawker night, and managed event budgets.

SKILLS

Languages: Python, TypeScript, JavaScript, C++, Java, SQL

Full-Stack & APIs: React, Next.js, React Native, Electron, FastAPI, Express.js, REST APIs

Data & AI: PostgreSQL, Qdrant, MongoDB, Redis, AWS Bedrock, LangGraph, MCP, Vector Search

Cloud & Infrastructure: AWS, EC2, Docker, Linux, GitHub Actions, CI/CD

SELECTED RECOGNITION

Berkeley AI Hackathon Top 15 of ~400 (2024) • Dorm Room Fund Pitch Competition Finalist, 5 of 160 teams (2025) • Northwestern VentureCat Semifinalist (2025) • AIME Qualifier (2021)
